

📁 Favorites ↔ Syllabus

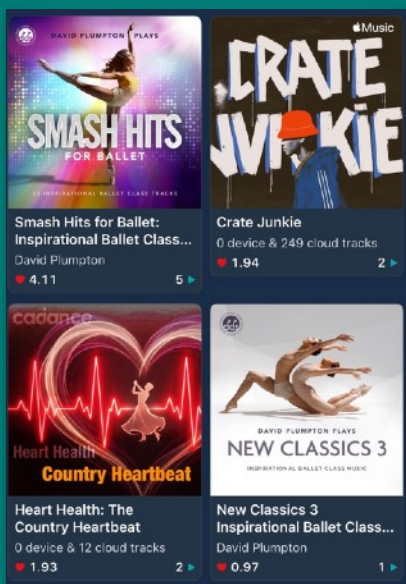

S A P 📺 🧑

The three main tabs in Cadance have two sides each. This is represented in this tour as

📁 Side A ↔ Side B. The first tap activates the tab, the next flips it between A & B.

📁 Favorites ↔ Syllabus

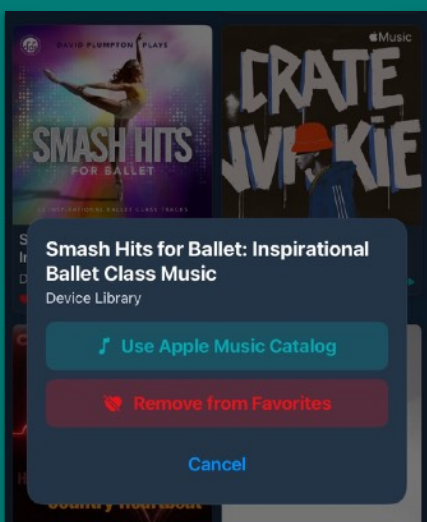

These cards are designed to keep your most played Albums and Playlists in front, for easy access.

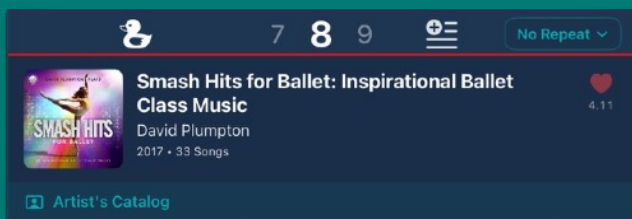

Sorted by ❤️ popularity, which increases when a track is played, and decays when you shift to different music. This happens regardless of the actual ▶ count.

Albums will have the artist name as subtext, Playlists will show the number of tracks within.

Long-press on a Favorites card to see the available actions menu, which might include **Use Apple Music Catalog** which will complete albums with missing tracks.

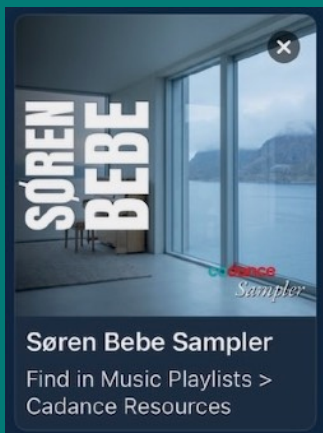

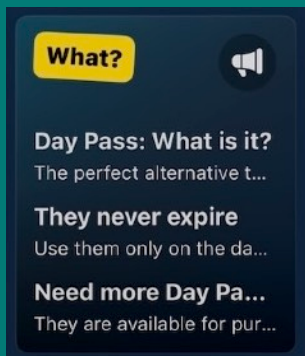

Open the details on any Playlist or Album and look for the popularity value on the right. If unplayed, a ❤️ will be shown. Tap the ❤️ to manually add the container to Favorites, giving it a play count of 1.

Note that Albums and Playlists in your Local Files can appear in Favorites, but the Syllabus contents never will.

Announcements

Slightly persistent cards that feature hints and help resources. These can be dismissed with a tap but are designed to be noticed.

Promoted Playlists

Our curated or selected Playlists that you might find useful.

Tapping the card will open the Playlist to show the contents. The

ⓧ will dismiss the card permanently.

There could be several of these cards to dismiss if you wish, or you can ❤️ the card to promote it to your Favorites grid for access later.
