

Import Your Music

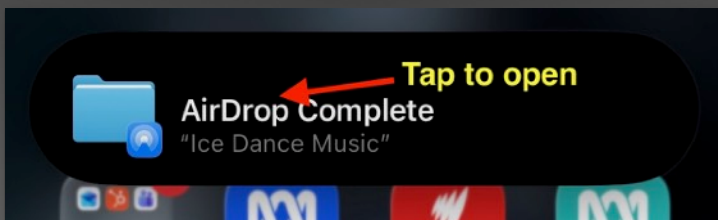

To install music, just AirDrop the folder, .zip, or individual tracks to your device:

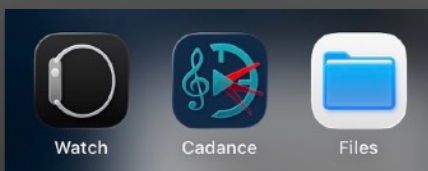

Or use Finder on the laptop and drop files on Cadance:

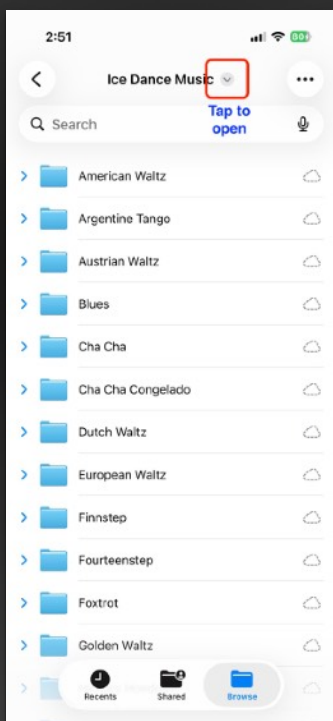

The Files App will launch from the AirDrop Completion banner (but it disappears quickly):

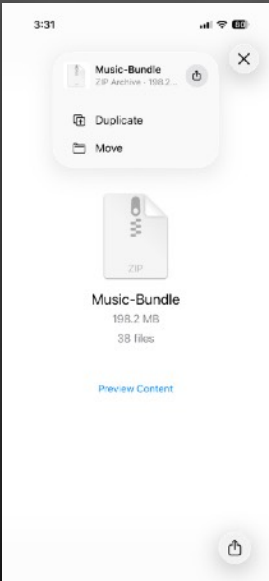

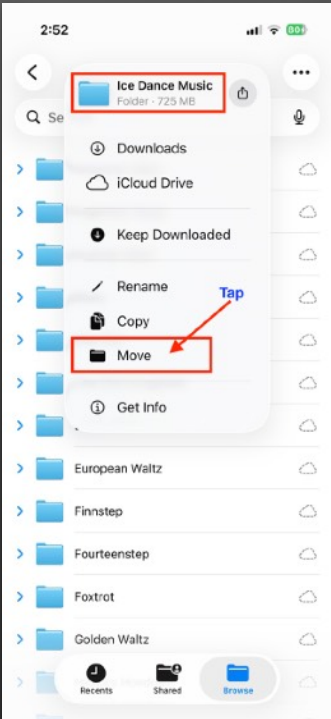

You can also start it from the Files App icon as seen here:

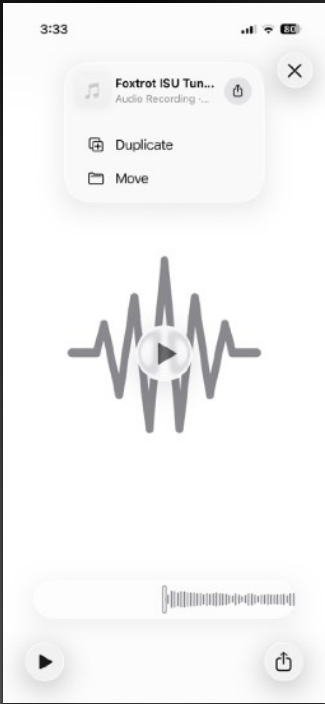

The AirDrop Completion banner will open your transferred folder or the file itself. Expand the action menu:

You'll want to select the Move option:

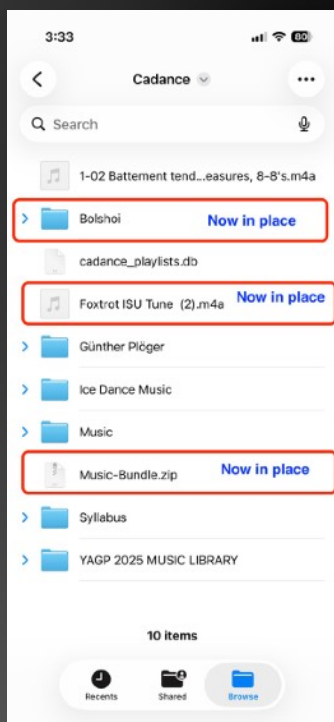

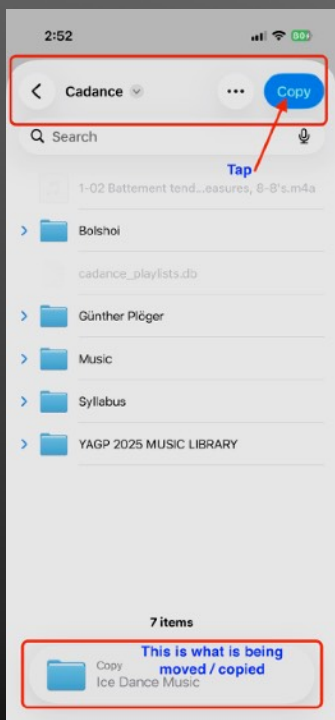

Zip file example menu

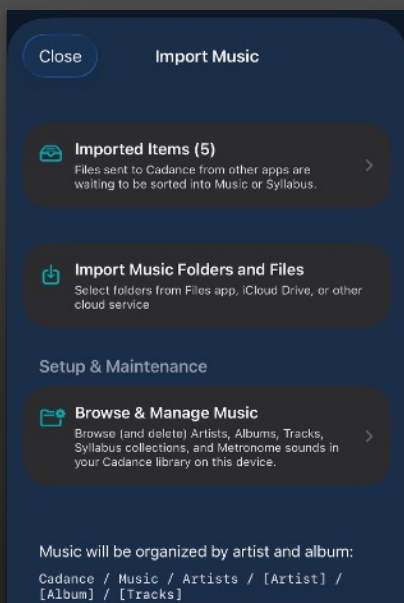

Audio file example menu

Now save the music to the On my iPhone / iPad Cadance folder root. Your device might switch to a Copy rather than a Move. Tap the button regardless.

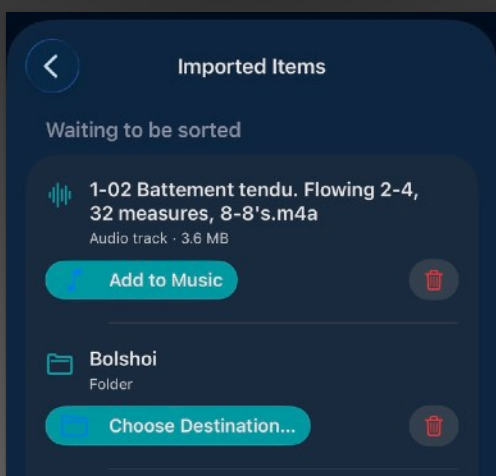

Your files will appear inside Cadance at the top folder level.

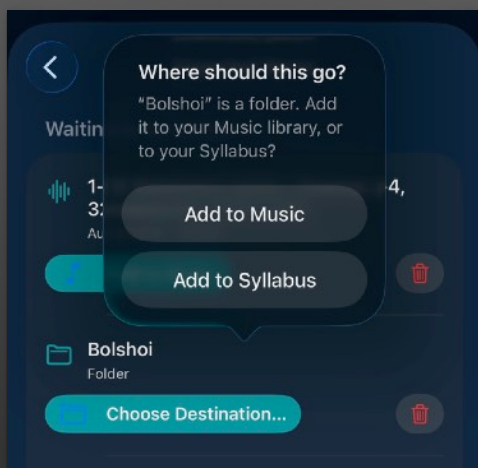

Return to Cadance and open the Import Music panel with the **⊕** button found on the top bar and you'll see something like this:

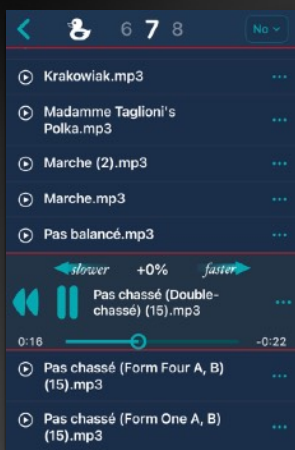

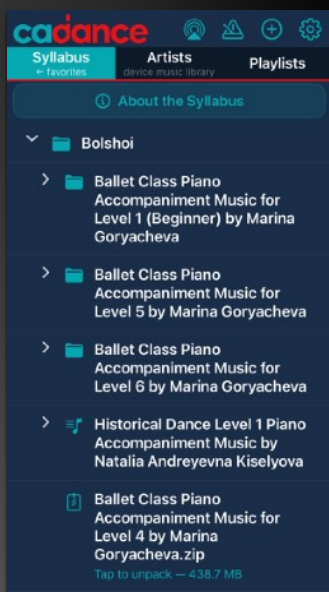

If the items you have dropped onto Cadance are found, you'll see Imported Items at the top. I have 5 awaiting, tapping one lets you select the destination:

Select Add to Syllabus:

When you return to the Syllabus tab (after closing the import screens) you'll see the complete folder structure including music files that you can play from there:

Syllabus tracks are playable on the Patron tier and with the Day Pass.
