

📁 Favorites ↻ Syllabus

The Syllabus tab is dedicated to your music libraries from curriculum vendors and societies.

Import the folders and zips to **play the tracks in-place with full control**. This will eliminate the need to reorganise the library.

Using Bolshoi as an example, this would be the music opened on your laptop:

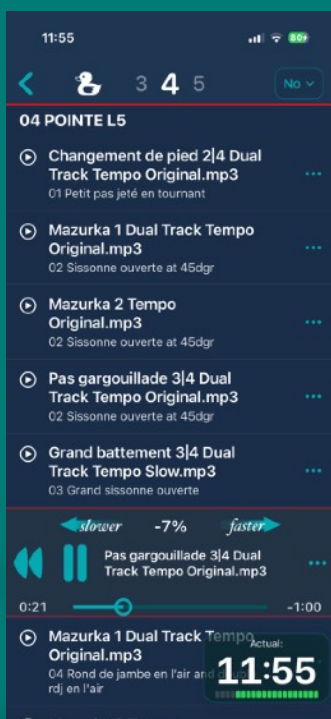

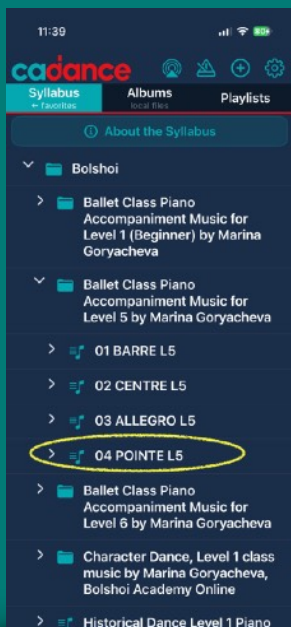

The path to the highlighted track is not simple:

Bolshoi/Ballet Class Piano Accompaniment Music for Level 5 by Marina Goryacheva/04 POINTE L5/03 Grand sissonne ouverte/Pas gargouillade 3|4 Dual Track Tempo Original.mp3

The **yellow** parts of the path are important context that shouldn't be lost. That is 4 to 5 levels of folders to navigate and truncation of the path is inevitable.

Cadance is the simple solution for this music library challenge.

On both iPhone and iPad, the app gives you 2 simple screens, no loss of context, and a clear view of the exercises and music.

Some freely available examples:

[Ice Skating Australia](#)

[YAGP 2025](#)

Syllabus Notes Viewer

The viewer will automatically appear when you tap on non-music files like .txt, .md (markdown), .pdfs, images and .mp4 videos.

On iPhone the viewer appears above or below the Cadance interface, and on iPad the viewer is on the left or right edge.

A splitter bar **A** appears that you can drag to resize the view. Within the view you can pinch to zoom and drag the contents vertically to scroll.

The **B**  and  top buttons will swap the viewer pane to the other side. **C**  minimises viewer, keeping the document loaded and restorable with a tap on the minimisation capsule. Close the viewer with .
